Alberto Campo Baeza

2007 EDU 0492 RES Madrid, Spain 0505 COM Granada, Spain

0667 The nursery school is located in the historic centre of the village of Covolo di Pederobba, adjacent to a sixteenth-century church and a former manor house. Low stone walls are an important visual element in this landscape, and their aesthetic is adapted in the design of the school to create a rectangular single-storey building that is closed off by concrete walls towards the village, but opening up to the garden behind. The school is made entirely of concrete and the plan is divided into three parts. Towards the road are the service areas, cloakrooms and a staffroom. Opposite these are five schoolrooms connected by sliding doors and facing the garden. The centre of the deep volume contains two exercise rooms and the lavatories. Skylights rise above the low volume of the school to illuminate these spaces. A taller dining hall and common room cut through the width of the building. The entrance is located on one of the narrow sides and leads into a small courtyard. Another court is positioned at the other end of the building to provide outside space for breaks. The whole structure is colour coded: yellow and green door frames for children, blue for teachers and purple for dining hall and common room. Bright red paint marks transitional areas such as the walls of the courtyards and the entrance, as well as the skylights. All exterior surfaces are coloured to match the surrounding landscape, resulting in a rough surface that is in keeping with the ancient walls of the village.

- 1 South facade
- 2 Entrance courtyard

was historically used for agriculture and formed part of the ancient defences surrounding Venezia. This project consists of several small buildings for recreational and transport purposes placed at two points on the southwest shore of the island. It also includes the restoration and conversion to exhibition space of the Massimiliano tower, one of a network of nineteenth-century military structures across the lagoon. A new, low volume containing service and storage spaces sits where the original entrenchments once were. Another intervention is a new landing stage adjacent to the tower which receives vessels carrying farming products and boats carrying tourists. White Istrian stone, red bricks and Iroko wood panels were used in the construction of the buildings and their connecting exterior features, such as the quays and the enclosing wall. To the northwest of the tower and on the southern shore of Sant'Erasmo is a second landing stage for water buses, with accompanying small buildings using the same stone, brick and wood materials. These accommodate a first-aid point and serve a new small car terminal next to a paved square.

0669 The island of Sant'Erasmo, situated in the northern part of the Venetian Lagoon.

- 1 Landing stage with Massimiliano tower behind
- 2 Detail of first-aid building timber cladding
- 3 Terminal brick square with first-aid building
- 4 Dock in first-aid building

University Student Housing

C+S Associati

2006 EDU

6671 This complex is situated on a former Fatstein Novoli, a suburb northwest of Franze's historic centre. In the 1990s, a team of architects led by Léon Krier designed a masterplan for the redevelopment of the Their aim was to reduce traffic by estoring the patterns of a medieval town its irregular plan, and variety of spaces and roadways. In the Fiat area, a park was set out between two built-up areas comprising residential buildings with consistent proportions, colours and reterials. The student housing was placed inthe eastern corner of the site. Formally, the cesga consists of one U-shaped block that adosed by a second block to the southeast, which is cut in two by a passageway leading nothenew quarter. All uses are clearly deinquishable on the facades. A concrete tass unifies the complex, rising from too foors of underground parking and deleting into an arcade on the remestern side. On its upper floors, the Pshaped block provides lodgings for 250 audents. Control of the view and natural light breach apartment is afforded by horizontal grey wooden screens that cover the facades at these levels. The second block faces abusy road and contains study rooms and communal facilities behind a large glassbook wall. A refectory and several shops are located on the ground floor. The dwellings on the upper floors are accessed via the inner curvard north of the passage. Brightly lit errance balconies line the inner side of the U staped block facing the communal block. raide, coloured plaster animates the communal areas, although the predominant adour of the building is grey.

- Southeast facade
- Arcade on northwest facade
- 3 Garden facade, accommodation block
- 4 Ramp into underground parking 5 Restaurant entrance
- 5. Entrance hall
- Access corridor leading to apartments 8 Roor plan
